

SRIPRIYA BOMMAKANTI

Software Engineer | Python | FastAPI | Full-Stack Development | AI & Data

- +91 8074666950 • sripriyabommakanti@gmail.com • [LinkedIn](#) • [LeetCode](#)
- Greater Paris Metropolitan Region

PROFESSIONAL SUMMARY

Software Engineer with hands-on experience building Python-based enterprise applications, FastAPI services, and full-stack data platforms. Currently contributing to a TCS engagement for a PwC client, developing a desktop application for visual DAG-based data pipeline design and execution. Skilled in Python, FastAPI, React.js, REST APIs, Pydantic, YAML, asynchronous processing, and data libraries, with additional knowledge of Generative AI, LLMs, RAG, and vector databases. Strong foundation in backend development, API integration, data processing, and software engineering.

TECHNICAL SKILLS

- **Languages:** Python, Java, JavaScript, C, SQL
- **Development:** FastAPI, React.js, REST APIs, Pydantic, YAML, HTML, CSS, Asynchronous Processing
- **AI & Data:** Generative AI, LLMs, RAG, FAISS, ChromaDB, NumPy, Pandas, Polars
- **Database & Concepts:** MySQL, DAG Pipelines, Workflow Orchestration, Schema-Driven Development, Data Processing, Automation, OOP, Data Structures & Algorithms, DBMS

PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER

Jan 2026 - Present

TCS - PwC Client

- Build a Python-native desktop data platform for visual DAG-based pipeline design and execution.
- Develop FastAPI services for assets, folders, import/export, node configuration, and asynchronous execution.
- Implement YAML and Pydantic schemas for Select, Text Input, Union, Text-to-Columns, Record ID, and Summarize transformation nodes.
- Align backend schemas with React.js rendering to improve configuration consistency and reduce invalid workflows.
- Apply schema-first validation and code-generation workflows to streamline development of new node capabilities.
- Integrate FastAPI, React.js, and Electron across enterprise application workflows.
- Implement Windows UPN-based owner resolution for accurate asset ownership within the desktop application.

PROJECTS

HANDROID - GESTURE-BASED FILE TRANSFER SYSTEM

- Developed a touch-free file-transfer application using **OpenCV and real-time hand movement detection**.
- Implemented gesture recognition to translate predefined hand movements into file-transfer actions.
- Applied real-time image processing to enable computer interaction without conventional input devices.

EDUCATION

Gokaraju Lailavathi Women's Engineering College

Bachelor of Engineering, Computer Science - 8.7 CGPA (2021 – 2025)

CERTIFICATIONS

- Data Structures and Algorithms Using Java | HackerRank Java Certificate | Joy of Computing Using Python - NPTEL
